***Allowable Subject Matter***

1. The following is an examiner's statement of reasons for allowance: This invention relates generally to video call communications, and more specifically relates to a system and method for configuring a video call with graphical representation of video devices.

The prior art of record in combination or alone fails to teach or suggest these elements of independent claims 1, 13, and 21 in combination with other elements. For example independent claim 1 has claim limitations such as a video call configuration window having plural icons, each representing a video device, and a directed graph relating the icons to represent the configuration of the video devices in the video call, the directed graph depicting one or more parameters for one or more of the video devices of the video call configuration, wherein video call configuration window operable to allow a user to draw a directed graph between icons that represent compatible video devices in a valid video call configuration and prohibit a user to draw a directed graph between icons that represent an invalid video call configuration. Independent claim 13 has claim limitations such as selecting a first video device for display as a first graphic by the user interface, selecting a second video device for display as a second graphic by the user interface, selecting a first graphic to initiate a directed graph arrow originating from the first graphic, selecting a second graphic to draw a directed graph from the first graphic to the second graphic representing a video call between the first and second video devices, determining if a video call between the first and second video devices is a valid action, and prohibiting the drawing of a directed graph arrow between the first and second graphics unless the video call between the first and

second video devices is valid action. Independent claim 19 has limitations such as plural video devices, a video network platform in communication with plural video devices, a user interface control associated with the video network platform and operable to depict the video devices as graphical icons, the user interface further operable to depict plural of the video devices requested by a user for inclusion in a video call configuration as a graphical icons related by a directed graph if the video call configuration is valid, the user interface control further operable to determine that one or more video devices requested by a user for inclusion in the video call configuration have an invalid configuration and to prohibit relating of the graphical icons associated with the invalid configuration by a directed graph. For the above reasons independent claims 1, 13, 19, and their dependent claims 2-4, 6-12, 15-19, 21 are allowable.

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

--(JP 406062142A) to Kitahara et al. discloses means to improve the operability for communication connection by dynamically changing and displaying functions of plural communication control icons corresponding to cooperative work forms on a terminal and connecting a line with a communication medium corresponding to selected function.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
